

# PROJECTFP

Martin Helsø

29th May 2019

The L<sup>A</sup>T<sub>E</sub>X package `projectfp` is used to create front pages for the final projects in the courses MAT2000, MEK3200 and STK-MAT2011.

## 1 Usage

The course is specified by passing one of the options `MAT2000`, `MEK3200` or `STK-MAT2011` to the package.

The front page is generated by issuing the macro `\projectfrontpage`, which collects data from `\author`, `\title` and `\supervisor`. These must be called *before* `\projectfrontpage`. If there are multiple supervisors, each person's name must be entered as a different argument to `\supervisor`:  
`\supervisor{First Name}{Second Name}...{Last Name}`.

The front page is printed in English by default. If either `norsk` or `nynorsk` is given as an option to `projectfp` or to the document class, then it is translated into Norwegian.

## 2 Example

---

```
\documentclass{memoir}

\usepackage[MAT2000]{projectfp}

\author{Anders Lindstr{\o}m}
\title{A hyperreal approach to calculus}
\supervisor{Nikolai Bj{\o}rnest{\o}l Hansen}

\begin{document}
  \projectfrontpage
\end{document}
```
